Attachments: Ppt Pond Water Volumes.xlsx

Yes, previous correspondence mainly dealt with actual surface and pore water and not so much on storm water, which is a variable. Taking that away we have approximately 215M gallons at Possum and 158M gallons at Bremono. We generated these two documents concerning water due to the various questions we had been receiving about specific waters and the focus mainly on what is in the ponds as opposed to what may be added to them over time.

Mike

The number for Possum seems high based on previous correspondence

Subject: Interview

Hi

I have an interview with an S & P analyst later this morning. One of the question is how many gallons of water we have to discharge at Bremo and Possum.

Can you send me this number again – I have it in my e-mail somewhere but I have like a 1000 e-mails in my box.

Thanks.

Christine
